Subject: Benaka - B291 Floor Recoat (with Radon venting)

LT Lee,

I am writing to confirm my comments at our inspection this afternoon.

Although my role was limited, and I picked up this project mid-stream, I believe it was an exemplary job.

Our "Customer" in B291 was very engaged and supportive. That makes a big difference in a teaming to build a successful project.

Likewise, re: You and Rick Frye for NAVFAC construction oversight.

This was my first job with Benaka. I found them to be responsive to my detailed submittal review comments and very professional during meetings and other communication. They were very cooperative with various issues including, but not limited to, scheduling (including working with RadCon Clearances), sub-contractor management, and especially the task order Modification for radon venting that arose well after project start, and late in the fiscal year.

Most importantly, Benaka staff appeared to be genuinely interested in doing quality work and giving good value to the Navy. Based on today's Final inspection, they were successful in that effort.

V/R,

Robert
